

APRIL NEWSLETTER

Dear Parents,

March has been a very important month for all mothers in Kuwait, and The Little Genius joined in the celebration of Mother's Day with a gift of roses, a song and snacks prepared with love by all the children for the occasion.

It was delightful for everyone at the nursery to see so many mothers joining in with their children to mark this very special day.

Later in the month, the children went on a field trip to **Kidzania** where they had an amazing time making pizzas, riding in an ambulance, enjoying the soft play area and even flying an airliner! There was so much to do and see, giving the children a day full of fun and adventure.

We also welcome all the new families who have joined The Little Genius Nursery this month.

April will bring even more new activities to excite and challenge our children, like Spring Camp which is on the **week 9-13 April**, the Earth Day celebration and a photo shoot that will give our families something to remember this special time in their children's lives.

Finally we would like to remind you that the **registrations** for the new academic year are already open.

We are looking forward to an April packed with fun, excitement and new discoveries!

Babies!

The babies have been exploring the sensory world with activities like messy play, including making soap slime, playing in the garden with water-and-sand mud, and creating large collective paintings among many other ways to stimulate their growing minds and bodies.

Toddlers!

Our toddlers have been extremely busy and increasing their sense of independence by putting on and taking off their coats and shoes, washing up their plates and cups and having a great time in the sensory room and in the gym.

Nursery!

Nursery children have been fascinated by the speed of their cars, creating ramps and racing cars down the slide to see which goes faster. To extend this discovery further, they made a musical accompaniment, louder sounds for faster cars and softer for the slower ones.

Pre-K!

Pre-K has been investigating nature by planting potatoes and helping them grow, using their magnifying glasses to see how ants in the outside area move and also using their magnifying glasses to confirm their hypotheses about how other insects live in the world around them.
